EXPERIMENT 8

NAME:JAI VARDHAN UL ROLL NO : 240701201

AIM

To create storyboards that show the user flow of the MyPlanner application using Balsamiq.

INTRODUCTION

A storyboard is a set of simple screens that show how a user uses an application step by step. It helps to understand how the app works from starting to ending.
In UI design, storyboards are useful because they show the flow clearly between different screens.
Balsamiq is a wireframing tool used to create simple designs. It focuses more on layout and structure rather than colors and design. So it is easy to quickly create screens and make changes.
In this experiment, Balsamiq is used to design a simple application called MyPlanner. It includes tasks, calendar, and notes.

SOFTWARE USED

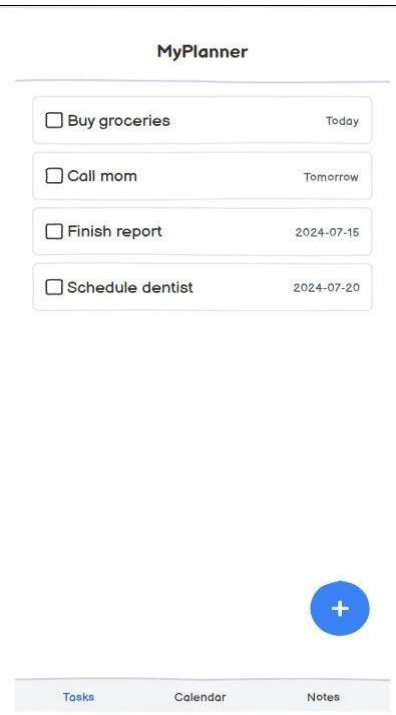
- Tool: Balsamiq Wireframes
- Type: Wireframing tool
- Purpose: To design storyboard and user flow

ABOUT THE APPLICATION — MyPlanner

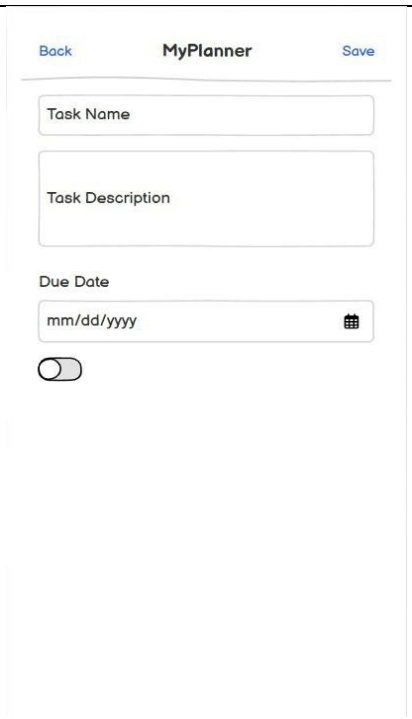
MyPlanner is a simple app used to manage daily activities.
It has three main parts:

- Tasks → to manage daily work
- Calendar → to see dates and schedule
- Notes → to write and store information

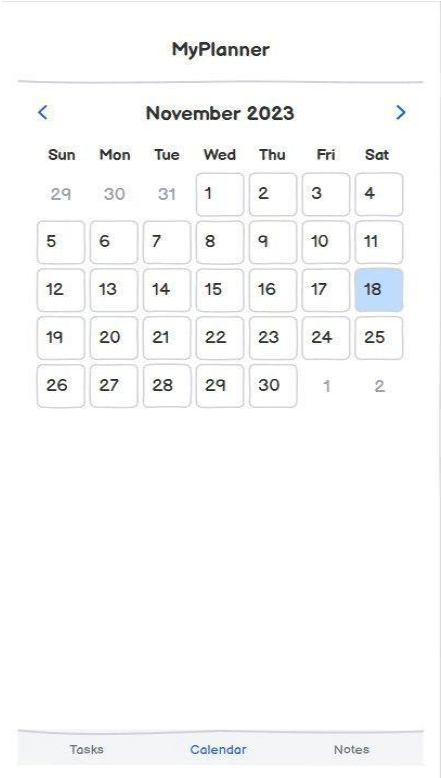
STORYBOARD — USER FLOW SCREENS



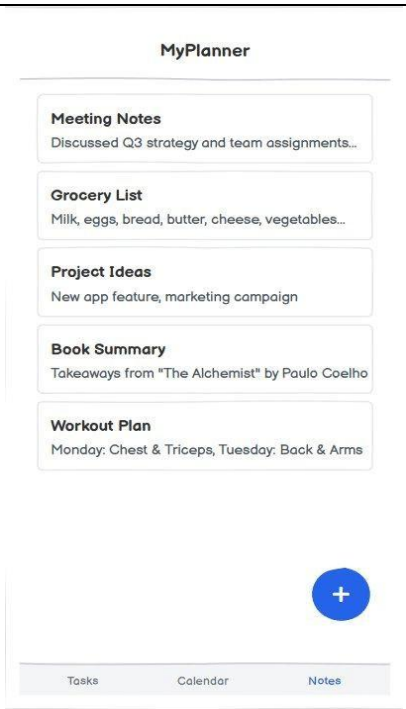
Screen 1: Tasks List View



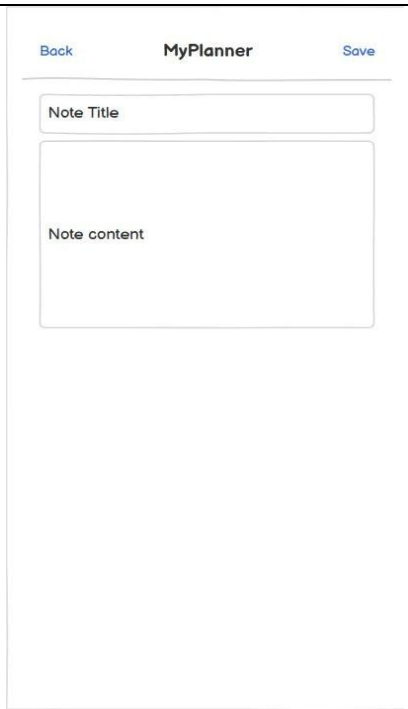
Screen 2: Add New Task



Screen 3: Calendar View



Screen 4: Notes List View



Screen 5: Add New Note

SCREEN DESCRIPTIONS

Screen 1: Tasks List

This is the main screen of the app.
It shows all the tasks in a list format.
Each task has a checkbox and due date.
There is a (+) button to add new tasks.

Screen 2: Add New Task

This screen opens when the user clicks the (+) button.
It contains fields like:

- Task name
- Description
- Due date

There are options to save or go back.

Screen 3: Calendar View

This screen shows a monthly calendar.
The current date is highlighted.
User can move to next or previous month using arrows.

Screen 4: Notes List

This screen shows all saved notes.
Each note has a title and small preview.
There is a (+) button to add new notes.

Screen 5: Add New Note

This screen is used to create a new note.
It contains:

- Note title
- Note content

User can save the note or go back.

USER FLOW SUMMARY

- First, user opens the app and sees the tasks screen
- User can add a task using (+) button
- User can switch to calendar to check dates
- User can go to notes section to view notes
- User can create a new note

RESULT:

The storyboard for MyPlanner application was created successfully using Balsamiq, showing the complete user flow in a simple way.
