EXPERIMENT 7

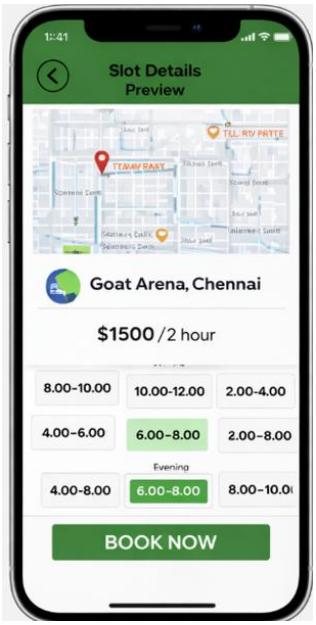
NAME: JAI VARDHAN UL ROLL NO: 24070201

Design an application layout using different colors, text styles, and visual elements. Share the design with users through a Google Form or any other feedback collection method to gather their responses. Based on the feedback received, refine and improve the design accordingly.

SCREEN 1:

SCREEN 2:

SCREEN 3:



1) Login Page

The **Login Page** is the first screen shown to the user. It is used for entering the username and password to access the application.

In this screen, I used a **green theme** because green is commonly connected with sports grounds and turf fields. I also added a **turf background image** and the app logo to make the screen look related to the purpose of the app.

The page includes:

- Username field
- Password field
- Login button
- Register option

I used simple input boxes and rounded buttons to make the screen clean and easy to use.

Find Turf Page

The **Find Turf Page** is the screen where users can search for available turfs.

This page was designed to help users find turfs based on their **location** and **date**. At the top, I added:

- A **search location bar**
- A **date and day selection field**

Below that, I added a **map-style image** to visually show the idea of location-based searching. I also displayed some sample turf options such as:

- Stettlar Sports Turf
- Greenway Turf

Each turf item includes:

- Turf name
- Location
- Star rating

At the bottom, I added a navigation bar for easy movement between screens.

3)**Slot Details / Slot Selection Page**

The **Slot Details Page** is used when the user selects a turf and wants to book a time slot.

This screen contains:

- A small **map preview**
- The selected turf name
- Price details
- Available time slots
- A **Book Now** button

To make the selected time slot stand out, I highlighted it using **green color**. The main purpose of this screen is to help users clearly view the available timing and confirm their booking.

FEEDBACK:

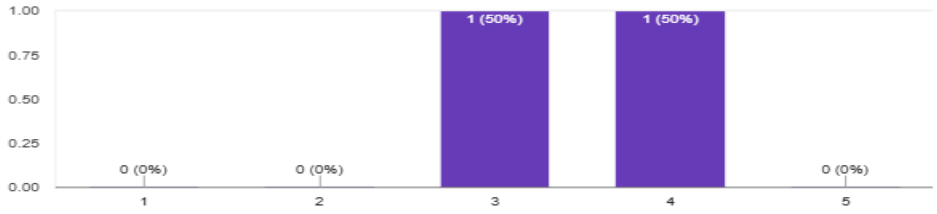
Summary Question Individual

1) How would you rate the overall design of the app?

Copy chart

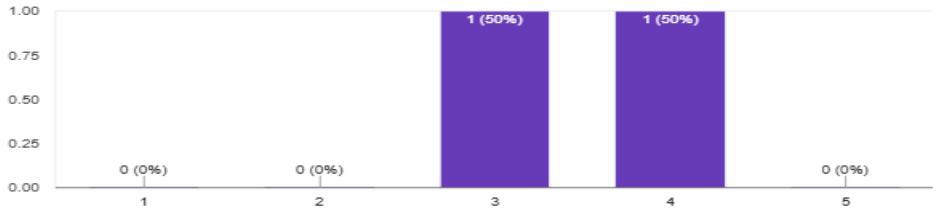
2 responses



2) How easy is it to understand the screen layout?

Copy chart

2 responses



3) Is the color combination used in the app good?

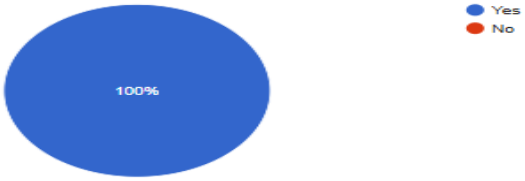
Copy chart

2 responses

4) Are the text and labels easy to read?

Copy chart

2 responses



5) What changes would you suggest to improve the app design?

2 responses

Change the design colour related your app design and use the familiar icons.

Change the icons

Feedback Received from Users:

From the responses collected, I observed that the users were able to understand the screens properly, but they also pointed out some areas where the design could be improved.

1. Overall Design

Users gave a moderate response to the overall design of the app. This showed that the design was understandable, but still needed some refinement to look more complete and visually appealing.

2. Color Combination

When asked whether the color combination used in the app was good, the response was **No**.

This indicates that the colors used in the initial design were not fully matching the theme and purpose of the application. Since this is a **Turf Booking App**, the design should visually reflect a sports or ground-related feel in a more balanced and attractive way.

3. Text and Label Visibility

For the question regarding text and label readability, the response was **Yes**.

This means that the text size, labels, and content placement were clear enough for users to read and understand. So, readability was one of the positive aspects of the design.

4. Suggestions Given by Users

Users also gave direct suggestions for improving the design. The main suggestions were:

- Change the design colors so that they better match the app theme
- Use more familiar and understandable icons
- Replace the current icons with better ones

These suggestions helped identify the exact visual elements that needed improvement.
